

Bryce Canyon National Park - Utah

Hoodoos and forest mixed together

Bryce Canyon, famous for its worldly unique geology, consists of a series of horseshoe-shaped amphitheaters carved from the eastern edge of the Paunsaugunt Plateau. The erosional force of frost-wedging and the dissolving power of rainwater have shaped the colorful limestone rock of the Claron Formation into bizarre shapes, including slot canyons, windows, fins, and spires called "hoodoos".

Did You Know?

The Bryce Canyon Paintbrush was discovered June 24, 1965 at Inspiration Point in Bryce Canyon National Park. This rare wildflower is only found in southwestern Utah.
